IN THE SPECIFICATION

The following has been inserted on page 1, line 1.

--REFERENCE TO CROSS-RELATED APPLICATIONS

This application is a divisional of Application No. 09/798,621, filed on March 2, 2001, pending, which is a continuation of Application No. 09114,773, filed on July 4, 1999, U.S. Patent No. 6,209,841.--

IN THE CLAIMS

Claims 1 through 49 have been cancelled.

Claim 50 has been added as follows.

50. (New) A method for isolating a load that is separated from a floor, comprising:
selecting a transfer function from a plurality of transfer functions;
sensing movement of a point between the load and the floor;
generating a feedback signal that corresponds to the sensed movement; and,
generating a drive signal to drive an actuator in response to the feedback signal, the drive signal being a function of the selected transfer function.
